Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

1. Claims 11-59 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the Response to Election/Restriction filed on 11/03/2003.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Mochizuki (US Patent No. 5266969).

As per claim 1, Mochizuki discloses a printer for transferring images to media using a multi-color dye diffusion process, the printer comprising:

a print station (20) including a printhead (23a) and a platen (24) for receiving sheets of receiver media fed therebetween from an input path (P2);

a first discharge path (P3) for translating imaged receiver media from the print station to an output tray (31); and

a second discharge path (P₂) for translating receiver media from the print station to a compartment separated from the output tray during intermediate passes of the dye diffusion process.

Art Unit: 2861

As per claim 2, the printer disclosed in Mochizuki further comprises an output diverter (42) which is movable to guide media sheets from the print station to said first discharge path when said output diverter is in a first position, and to guide media sheets from said print station to said compartment when said output diverter is in a second position.

4. Claim 10 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kamoda (US Patent No. 5253941).

With reference to Figs. 8-12 and the detailed description thereof, Kamoda discloses a printer for use in transferring an image to a media sheet using either a dye diffusion process or a direct thermal process, the printer comprising:

a platen (61),

a printhead assembly having a printhead (62) and a point of rotation allowing said printhead to be rotated between a first printhead position in which said printhead is proximate a media sheet in contact with said platen and a second printhead position in which said printhead is separated from said platen; and

a dye diffusion donor apparatus having a donor spool (4) and a take-up spool (5) for dispensing a donor ribbon between the printhead and said media sheet when said printhead is in said first printhead position during dye diffusion printing,

wherein one of said donor spool and said take-up spool is moveable between a first spool position and a second spool position, said donor ribbon being dispensed between said printhead and said media sheet when said one of said donor spool and said take-up spool is in said first position.

Art Unit: 2861

Allowable Subject Matter

5. Claims 3-9, 60-70 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: As per claim 3 and dependent claims thereof are allowable at least for the inclusion of the limitation "a dye diffusion donor apparatus having a donor spool and a take-up spool for dispensing a donor ribbon between the printhead and said media sheet when said printhead is in said first printhead position during dye diffusion printing, wherein said dye diffusion donor apparatus is movable such that said donor ribbon is not dispensed between said printhead assembly and said media sheet during direct thermal printing"
